# Sustainability Report

## GCC's Message on Sustainability and Environmental Strategy

#### Dear Stakeholders,

GCC's vision is to be the best cement company in North America with the proper balance of people, profit and the planet. With planet at the core of our vision, every decision we make in our sustainability program ensures that the balance is maintained for future generations. As the lead for sustainability at GCC, I'm extremely proud of how we are laser-focused on our climate change strategy with an emphasis on reducing our CO2 emissions.

In 2021, GCC strengthened our commitment to reduce our CO2 emissions by validating our **Science Based Target** to the wellbelow two-degree (Celsius) curve, joining the Race to Zero and securing a **sustainability-linked bond** tied to our scope 1 emissions emitted per ton of cementitious material. Senior management's compensation is now tied to meeting sustainability goals. This shift of corporate **remuneration** further shows GCC's commitment to meeting our sustainability targets.

**GRUNDEX** 

GCC is expanding research into **carbon capture technology** which we believe will also help us reach our goals and long-term sustainability commitments. GCC is seeking a unified technology for all of our facilities.

For the size of our company and the regions in which we operate, these are very progressive commitments. I'm proud and excited to be a catalyst of progress toward a low carbon future.

By 2024, all of our cement operations will convert to **100% portland limestone cement (PLC)**. GCC's resources are being allocated to fill customer demand and also enable our customers to reach their sustainability targets. Together we are building more sustainable and resilient homes, businesses and communities.

We are very active in the regions where we operate. In 2021, we shared our industry's goals and targets with regulators, non-governmental organizations and various agencies. We educated them on what can and cannot be done with regards to CO2 emissions in the short, medium and long term to achieve our net zero commitment.

GCC is as committed to our **people** as we are to combating climate change. GCC's **diversity and inclusion** committee promotes equal opportunities for hiring and increases professional development for all regardless of race, gender, sexual orientation, religion or age. The committee is made up of representatives from all business units and areas where we operate.

GCC saw immediate gains from our strategic focus on diversity and inclusion as the percentage of women in management roles increased 25%. As a female leader, in a male-dominated industry, this increase is exciting and illustrates GCC's belief that a more diverse workforce means a stronger, better company for all of our stakeholders.

SASB INDEX

In 2021, we launched a **materiality assessment** to re-engage our stakeholders on environmental, social and governance (ESG) topics. This process ensured that GCC's priorities aligned with those of our stakeholders – internal and external. The findings are the foundation of our sustainability efforts. For more on the results of the assessment, please see pages 18-22.

Additionally, GCC constantly improves our sustainability reporting to increase transparency to our stakeholders. We actively listen to all our stakeholders and are working diligently to move our sustainability strategy forward faster.

**Innovation** will be key to the industry's ability to reach net zero. At GCC, our research and innovation are focused on clinker factor and on artificial intelligence for overall efficiency and transformational technologies.

GCC believes that innovative partnerships and creative solutions will help us reach our goals. **We can do it together!** 

#### Gina Lotito

Corporate Vice President for Sustainability and Environmental Strategy

# **TABLE OF CONTENTS**

## Escalante Elected to GCCA Board

In the fourth quarter of 2021, GCC's CEO Enrique Escalante was elected to the Global Cement and Concrete Association's (GCCA) board of directors.

The GCCA's board of directors is elected from and by its member companies; the board sets and oversees the strategic work of the organization. Directors are responsible for the management of the association's business, in accordance with its objectives. Escalante said his contribution should be aligned to advance the GCCA's strategy and its execution, principally to became a net zero carbon industry by 2050.

He expects his biggest challenge will be to understand and adapt each member country's different national and local regulations as well as many different stakeholders who have multiple and diverse needs and interests. The challenge will be to understand how to align his contribution to the progress of the GCCA strategy between the member cement and concrete companies around the world.

"The GCCA is a CEO-led industry initiative. It's members, Board of Directors, and Executive team are committed to sustainability – reducing the impacts of cement production and promoting the unique properties of concrete as a sustainable, durable and resilient building material – a material that will answer the needs of a growing and increasingly urban population that is set to exceed 9 billion people by 2050."

## Sustainability Goals

# Climate & Energy

GCC's Science Based Targets initiative (SBTi) CO2 target for 2027 is based on well below the two-degree curve and is 605 gross kgCO2/ ton cementitious material for scope 1. This target must be achieved by 2027 to ensure validation for the next five years on the 1.5-degree curve. GCC's SBTi 2030 target of 538 gross kgCO2/ton cementitious material takes into account a CO2 reduction road map focusing on four key levers: blended cements, fuel switching, energy efficiency and biogenic fuels. Transformational technology will get us to the 2050 goal.

> **605**kg gross CO<sub>2</sub> emissions per ton of cementitious material (scope 1) by 2027

GCC is committed to a safe, inclusive workplace where everyone feels valued and respected. By diversifying our workforce, we believe that we create a stronger company and stronger communities.

We're increasing our professional growth opportunities to our employees and vendors. And we want to continue to make GCC a great place to work – continuing to be certified through the GPTW institute in both Mexico and the U.S.

> 20% women in workforce 25% women in management

**Z5**hrs training & development/employee by 2030

**GRUNDEX** 

#### **Green CapEx**

In order to reach our 2030 and 2050 targets, GCC will shift to 100% portland limestone cement (PLC) by 2024. The majority of our plants are shifting production, and plant upgrades will allow us to reach 100% production capacity.

GCC has committed more than \$25 million for capital expenditures to service the market needs. Planned upgrades will build on our four levers which reduce our CO2 emissions and enable us to reach our 2030 target.

> **100%** PLC by 2024 **\$25+** million U.S. CapEx committed in 2021

**Note 1**: Cementitious material is defined in accordance with the Cement Sustainability Initiative (CSI) and the Global Cement and Concrete Association (GCCA) definition: Total clinker produced plus mineral components consumed for blending and production of cement substitutes.

**Note 2**: Gross CO2 emissions are the total emissions resulting from the chemical decarbonization of limestone and the emissions resulting from the burning of fossilbased fuels and alternative fossil fuels. Compared with gross CO2 emissions, net CO2 emissions do not include CO2 from alternative fossil fuels.

**Note 3**: CO2 emissions from fuels: Scope 3 emissions were assessed according to the World Business Council for Sustainable Development (WBCSD) and CSI scope 3 methodology. The methodology recommends the cement industry consider at least these four categories to determine scope 3 emissions: i. emissions due to clinker/ cement bought, ii. fuel- and energy-related activities (not included in scope 1 and 2), iii. upstream transportation, and iv. downstream transportation and distribution. In 2021, GCC added category 11 (products sold from the coal business unit) into our calculations.

Note 4: This figure was updated to add the thermal energy use out of the kilns.

**Note 5**: GCC used the World Resources Institute (WRI) aqueduct water tool to assess risk areas.

Note 6: Quarries at GCC's cement plants were assessed.

Note 7: Overall coverage was reassessed in accordance with the Global Cement and Concrete Association's (GCCA) guidelines.

**Note 8**: Emission figures since 2019 were reassessed and adjusted based on GCCA guidelines for a conversion of pressure, temperature, oxygen and humidity. In 2021, we used two kilns in Chihuahua that do not operate continuously where we considered the production for the emissions calculations of these kilns along with the emissions average of all other kilns in order to calculate the absolute NOX, SO2 and dust emissions.

Note 9: Data represents information provided from the GCC Foundation and may not include specific plant-level information.

#### SASB INDEX

## Data Collection & Reporting Methodologies

**CO2 and power** We use the GCCA Sustainability Guidelines for the monitoring and reporting of CO2 emissions from cement manufacturing to calculate CO2 emissions between the 2005 baseline and the reporting year. Calculations for CO2 are generated from the Getting the Numbers Right spreadsheet developed by the Cement Sustainability Initiative (CSI). CO2 data in this report covers GCC's cement business unit. Default CO2 emissions factors for fuels are taken from the CSI guidelines.

**Other emissions** We use the GCCA Sustainability Guidelines for the monitoring and reporting of emissions from cement manufacturing. Emission levels can be measured continuously or based on spot measurements. In the U.S., this emission data is maintained at the plant level on a continuous basis.

**Water** The GCCA Sustainability Guidelines for the monitoring and reporting of water in cement manufacturing has been used as a reference to measure the water performance of the company.

**Biodiversity and quarries** The GCCA Sustainability Guidelines for the quarry rehabilitation and biodiversity management has been used as a reference to track the progress of improvements in our quarries.

Health & Safety We use the GCCA Sustainability Guidelines for the monitoring and reporting of safety in cement manufacturing and ready-mix production, issued November 2018. Health & Safety data are gathered at site level and consolidated at the division and/or country reporting unit level. The data covers all business segments and their industrial production sites.

Human Resources SuccessFactors and Dayforce are used to track and maintain employee information. GCC collaborates with the Great Place to Work institute to measure employee engagement and satisfaction. GCC University is the platform for employees development and tracks training hours per employee.

ABOUT

# **MATERIALITY ASSESSMENT**

GRI INDEX

SASB INDEX

## **Materiality** Assessment

As GCC deepened its commitment to its stakeholders, the company conducted a materiality assessment among the stakeholders to gauge alignment in light of the ever-shifting sustainability landscape. We believe that only through ongoing assessment and dialogue with our stakeholders can we continue to grow the company in the right ways and create value for our communities and investors.

The purpose of the materiality assessment was to:

- Identify the environmental, social and governance (ESG) areas most relevant to the long-term financial sustainability of GCC
- Assess each ESG factor and its importance to both internal and external stakeholders
- Evaluate trends to facilitate strategic alignment and inform our decisions on how GCC can prioritize advancing ESG capabilities and enhance disclosure to align with stakeholder expectations

We surveyed employees including senior leadership and the board of directors, vendors, customers and investors. The survey was bilingual (English and Spanish) and sent in the appropriate language to the appropriate stakeholders. The insights from the survey were layered alongside leadings ESG frameworks and standards as well as ESG rating agencies. The results will help GCC build the foundation for our ESG strategy for the next three to five years. GCC's leadership team now has the priority factors that will advance our ESG capabilities and enhance our disclosures.

**Internal survey participants** (employees, executive managers, senior executives and the board of directors) were asked to evaluate ESG factors through three dimensions:

- Importance to GCC's business strategy/financial success
- Importance to GCC's core values
- Perceived current state of GCC's performance

Each stakeholder group was weighted equally in the materiality analysis. Human capital and social capital factors were typically the most important to internal stakeholders; however, the other themes did not lag far behind.

**GRUNDEX** 

**External survey participants** were asked to evaluate ESG factors on their importance for GCC's long-term success. External stakeholders included investors, customers and suppliers.

Methodologies from leading frameworks, standards, rating agencies and industry best practices were analyzed to evaluate the importance of each ESG factor.

Five areas were identified for the survey with a total of 23 topics under the five areas.

### Governance

- Business Ethics
- Systemic Risk
- Management
- Stakeholder Engagement
- Board Independence & Diversity
- Governance of ESG

### Environment

- Climate Change & GHGs
- Energy Management
- Waste and Hazard
- Materials Managment
   Air Emissions
- Water Management
- Biodiversity

### Business Model & Innovation

- Competitive Behavior
- Supply Chain Management
- Product Life Cycle & Circular Economy
- Sustainable Products & Innovation

### Social Capital

- Data Security & Privacy
- Human Rights
- Product Quality & Safety
- Community Relations

### **Human Capital**

- Health and Safety
- Diversity, Equity, & Inclusion
- Employee Training & Development
- Labor Practices

SASB INDEX

Survey results were analyzed and the 23 topics were prioritized according to their criticality to both internal and external stakeholders.

## Eight critical factors rose to the top for both audiences.

**GRUNDEX** 

#### **Business Ethics**

Defined as: Ensuring the company's values, standards and norms are ethical and managed throughout business operations. These may include policies or practices relating to the code of conduct, anticorruption, grievance mechanisms, compliance, levels of executive compensation, audits and more.

#### **Product Quality and Safety**

Defined as: Promoting and protecting customer wellbeing through product offerings. This may include safety features, quality controls, incident mitigation and transparency and customer welfare initiatives, among others.

#### **Climate Change and Greenhouse Gases**

Defined as: Mitigating the company's impacts on climate change and managing the risks that climate change has on GCC's operations. This may include measuring our GHG emissions, carbon reduction goals, planning for the physical risks from natural disasters, carbon pricing and more.

#### **Energy Management**

Defined as: Measuring and minimizing the usage and impacts from energy consumption wherever feasible throughout the life cycle of the company's products and services. This may include efforts that promote renewable energy, energy efficiency, energy conservation among others.

#### **Air Emissions**

Defined as: Measuring and minimizing air pollution impacts wherever feasible throughout the life cycle of the company's products and services. This may include disclosing relevant air pollutants, mitigation strategies, environment and health impacts assessments. ABOUT

PERFORMANCE DATA

MATERIALITY ASSESSMENT

ASSURANCE STATEMENT

GRI INDEX

SASB INDEX

#### **Health & Safety**

Defined as: Ensuring the health and well-being for all employees. This may include providing a safe work environment, injury and incident transparency, promoting a work-life balance, emergency preparedness and more.

#### **Employee Training & Development**

Defined as: Implementing programs and policies that attract and retain talent. This may involve opportunities for job growth within the company, incentives to pursue new knowledge or skill sets, continual training to support employees, among others.

#### **Sustainable Products & Innovations**

Defined as: Researching, developing, and offering products that integrate ESG considerations and take advantage of consumer trends and interests in sustainability. This may include customer education on ESG-related products, efforts to develop and promote the sales of low carbon cement and other topics as they arise.

### Refining and Advancing GCC's Approach

Based on their different vantage points, GCC's internal and external stakeholders may have differing expectations. Our job is to seek out the commonalities and find bridges to span the differences. Our job also is to clear up any misconceptions or confusions through education internally and externally. GCC will accomplish this through:

#### **Strategic Alignment**

- Mitigate risks and take advantage of ESG-related opportunities
- Align ESG strategy with internal/external stakeholder priorities
- Integrate ESG into business model with leadership oversight

#### **Developing Capabilities**

- Leverage ESG working group to break down silos and advance initiatives
- Allocate resources to advance initiatives based on return on investment (ROI)
- Measure progress through metrics and data collection

#### **Enhanced Disclosure**

- Illustrate the company's commitment to ESG to various stakeholders
- Evolve with changing regulations, frameworks and ESG ratings

GRI INDEX

SASB INDEX

### Next Steps For GCC

With internal alignment, increased resources and more focused communication of ESG, GCC is well positioned to reach our 2030 and 2050 targets.

Based on the results of this materiality assessment, GCC will establish an ESG working group to:

- Break down silos and advance initiatives, and to
- Prioritize future work and allocate resources to advance initiatives based on return on investment

Additionally, GCC will:

- Facilitate awareness and alignment through communications with GCC's employees and the senior leadership team
- Integrate GCC's core mission and long-term financial strategy into an ESG approach
- Expand policies, programs and initiatives linked to critical ESG factors
- Continue measuring progress through metrics and data collection to demonstrate year-over-year progress
- Further develop key performance indicators and action plans for each target

# **ASSURANCE STATEMENT**

ABOUT

# **KPMG** Assurance Statement

To the Board of Directors of GCC, S.A.B. de C.V.:

We were engaged by the Management of GCC, S.A.B. de C.V. (hereinafter "GCC") to report on Key Indicators of Sustainability Performance (Non-Financial Information), prepared and presented by the Sustainability Corporate Management of GCC, included in the GCC 2021 Sustainability Report for the period from January 1 to December 31, 2021 ("the Report"), that are detailed in Annex A attached to this report (the "Contents"), in the form of an independent conclusion of limited assurance, regarding whether, based on the procedures performed and the evidence obtained, nothing has come to our attention that causes us to believe that the Contents are not prepared in all material respects, in accordance with the criteria established in the Standards of the Global Cement and Concrete Association ("GCCA"), as well as with the internal procedures of GCC for the management of sustainability aspects (collectively, the "Criteria").

#### **Management Responsibilities**

The Management of GCC, through its Sustainability Corporate Department is responsible for the preparation and presentation of the information subject to our review and the information and statements contained within it.

Sustainability Corporate Department of GCC is responsible for designing, implementing, and maintaining the relevant internal control for the preparation and presentation of the information subject to our review, which is free from material errors, whether due to fraud or error. GCC Management is also responsible for ensuring that the personnel involved in the preparation of the Contents are adequately trained, the information systems are duly updated and that any change in the presentation of data and/or in the form of reporting, include all significant reporting units.

#### **Our Responsibilities**

Our responsibility is to carry out a limited assurance engagement on the information concerning the Contents included in the Report and to express an independent conclusion of limited assurance based on the evidence obtained. We carry out our work based on the International Standard on Assurance Engagements (ISAE) 3000, "Assurance Engagements Other than Audits or Reviews of Historical Financial Information", issued by the International Auditing and Assurance Standards Board, that standard requires that we plan and perform the engagement to obtain limited assurance about whether, based on our work and the evidence obtained, nothing has come to our attention that causes us to believe that the Contents included in the Report for the period from January 1 to December 31, 2021, are not prepared in all material respects, in accordance with the criteria established in the Standards of the Global Cement and Concrete Association ("GCCA") and with the internal procedures of GCC for the management of sustainability aspects.

KPMG CARDENAS DOSAL S.C. (the "Firm") applies International Standard on Quality Control 1 and accordingly maintains a comprehensive system of quality control including documented policies and procedures regarding compliance with ethical requirements, professional standards and applicable legal and regulatory requirements.

We have complied with the independence and other ethical requirements of the Code of Ethics for Professional Accountants issued by the International Ethics Standards Board for Accountants, which is founded on fundamental principles of integrity, objectivity, professional competence and due care, confidentiality and professional behavior. The procedures selected depend on our knowledge and experience of the Contents presented in the Report and other circumstances of the work, and our consideration of the areas in which material errors may occur.

SASB INDEX

When obtaining an understanding of the Contents included in the Report, and other work circumstances, we have considered the processes used to prepare the Contents, in order to design assurance procedures that are appropriate in the circumstances, but not for the purpose of expressing a conclusion as to the effectiveness of GCC's internal control over the preparation and presentation of the Contents included in the Report.

Our engagement also included assessing the appropriateness of the main subject, the suitability of the criteria used by GCC in the preparation of the Contents, assessing the appropriateness of the methods, policies and procedures, as well as models used.

The procedures performed in a limited assurance engagement vary in nature and timing from, and are less in extent than for, a reasonable assurance engagement, and consequently the level of assurance obtained in a limited assurance engagement is substantially lower than the assurance that would have been obtained in the case of performing a reasonable assurance engagement.

#### Criteria

The criteria on which the preparation of the Contents has been evaluated refer to the established requirements and in accordance with the criteria established in the Standards of the Global Cement and Concrete Association ("GCCA") and with the internal procedures of GCC for the management of sustainability aspects.

#### **Inherent Limitations**

Due to the inherent limitations of any internal control structure, it is possible that errors or irregularities in the information presented in the Report may occur and not be detected. Our engagement is not designed to detect all weaknesses in the internal controls over the preparation and presentation of the Report, as the engagement has not been performed continuously throughout the period and the procedures performed were undertaken on a test basis.

#### Conclusion

Our conclusion has been formed based on, and is subject to, the matters outlined in this report.

We believe that the evidence we have obtained is sufficient and appropriate to provide a basis for our conclusions.

Based on the procedures performed and the evidence obtained, as described above, nothing has come to our attention that causes us to believe that the Contents detailed in Annex A attached to this assurance report, prepared by the Sustainability Corporate Management of GCC and included in the Report for the period from January 1 to December 31, 2021, are not prepared in all material aspects, in accordance with the criteria established in the Standards of the Global Cement and Concrete Association ("GCCA") and the internal procedures of GCC for the management of sustainability aspects.

#### **Restriction of Use of Our Report**

Our report should not be regarded as suitable to be used or relied on by any party to acquire rights against us other than the Management of GCC, for any purpose or in any other context. Any party other than the Sustainability Corporate Management of GCC who obtains access to our report or a copy thereof and chooses to rely on our report (or any part thereof) will do so at its own risk.

To the fullest extent permitted by law, we accept or assume no responsibility and deny any liability to any party other than GCC for our work, for this independent limited assurance report, or for the conclusions we have reached.

Our report is released to GCC, on the basis that it shall not be copied, referred to or disclosed, in whole or in part, without our prior written consent.

# **SASB INDEX**

The Sustainability Accounting Standards Board (SASB) is an independent, non-profit organization that sets standards to connect businesses and investors on the financial impacts of sustainability as well as environmental, social and governance (ESG) matters. SASB standards identify the subset of ESG issues most relevant to financial performance broken down into industryspecific standards by sector. GCC falls under the construction materials sector (Version 2018-10). For this sector, SASB identified the following as the material issues:

GHG emissions

Employee health and safety

- Air quality
- Energy management Water and waste water management
- Waste and hazardous materials management
- **Ecological impacts**

- Product design and life-cycle
- management
- Competitive behavior

This 2021 Sustainability Report marks the first time GCC is reporting on SASB Standards. Data collection was conducted in the cement division of the company. Key figures are checked for completeness and accuracy. However, we cannot completely exclude the possibility that this report includes erroneous information.

In July 2021, SASB merged with the IFRS Foundation. Together they have formed the Value Reporting Foundation, a global, non-profit organization to help businesses and investors create a shared understanding of enterprise long-term value and to drive improved performance. The new alliance, the International Sustainability Standards Board (ISSB), intends to deliver a comprehensive global baseline of disclosure standards to inform investors about a company's sustainability-related risks and opportunities.

GCC will follow this merger and report on any new standards developed as a result.

# ASSOCIATIONS

**GRUNDEX** 

# Asociacion

Mexicana de la Industria de la Construccion

Asociacion Mexicana de la Industria de la Construccion (AMIC) represents builders and suppliers in the Mexican construction industry. AMIC unifies the industry by forming a network of material and service suppliers and promoting their progress so that they remain at the forefront of social, economic and technological changes in the country.

Cmic

Cámara Mexicana de la

Industria de la Construcción

Camara Mexicana de la Industria de la Construccion

Camara Mexicana de la Industria de la Construccion (CMIC) is the institution in charge of representing, supporting and strengthening Mexico's construction industry through management, advice, training, professional training and integration of new technologies.

# CÁMARA NACIONAL DEL CEMENTO

Camara Nacional del Cemento La Cámara Nacional del Cemento (CANACEM) represents, promotes and defends the interests of the national cement industry and adopts programs that contribute to the development and expansion of economic activities, safety, sustainability and innovation. CANACEM serves as a consultative and collaborative body for the requirements, programs, problems and activities of the cement industry in Mexico. It is responsible for the design and execution of policies, programs and instruments that facilitate and promote the expansion of general economic activity.

CESPEDES

The Private Sector Studies Commission for Sustainable Development (CESPEDES) was founded to face the challenges of sustainable development posed by the incorporation of Mexico into global markets. CESPEDES is the Mexican chapter of the Business Council for Sustainable Development, WBCSD (World Business Council for Sustainable Development) and belongs to the Business Coordinating Council (CCE). CESPEDES represents a variety of extraction, manufacturing and consumer businesses that have a common interest in facing the challenges of sustainable development.

ASSURANCE STATEMENT

**GRUNDEX** 

# Centro Mexicano de la Filantropia (Cemefi)

For 16 years, GCC has been recognized by the Mexican Center for Philanthropy (Cemefi) and the Alliance for Corporate Social Responsibility (AliaRSE) as a socially responsible business. The voluntary and publicly committed ESR<sup>®</sup> distinction is given to organizations with socially responsible management and continuous improvement as part of their culture and business strategy. The ESR<sup>®</sup> distinction is given every year to ensure companies maintain a culture of social responsibility.

Global Cement and Concrete Association (GCCA) The Global Cement and Concrete Association (GCCA) is the trusted, authoritative global voice for the cement and concrete sector. GCCA is dedicated to developing and strengthening the sector's contribution to sustainable construction. GCCA aims to foster innovation throughout the construction value chain in collaboration with industry associations as well as architects, engineers, and innovators. In this way, the association demonstrates how concrete solutions can meet global construction challenges and sustainable development goals while showcasing responsible industrial leadership in the manufacture and use of cement and concrete. Full members must implement sustainability initiatives and set targets for performance improvement to achieve compliance.

GCC is part of GCCA's Innovandi initiative. Innovandi – the Global Cement and Concrete Research Network, has been formed by the GCCA to accelerate global collaboration on cement and concrete innovation, an important step in taking climate action. Innovandi is a large industry led consortium that ties together the cement and concrete industry with scientific institutions to drive and support global innovation with actionable research.

# Imcyc<sup>®</sup> Instituto Mexicano del Cemento y del Concreto

Instituto Mexicano del Cemento y del Concreto (IMCYC) is a nonprofit association dedicated to the research, teaching and dissemination of cement and concrete application techniques. Its mission is to promote the optimal use of cement and concrete to meet the needs of the market with quality, productivity and opportunity, helping to improve professional performance, development and economic benefit of the industry as well as society.

# National Ready Mixed Concrete Association

The National Ready Mixed Concrete Association (NRMCA) is the leading industry advocate for ready mix concrete, providing research, education and advocacy to its members. NRMCA has several committees where members and professional staff work together to support the mission, including sustainability initiatives to uphold principles of sustainable development.

United Nations Global Compact As the world's largest corporate sustainability initiative, the United Nations (U.N.) Global Compact is a voluntary initiative based on CEO commitments to implement universal sustainability principles and to undertake steps to support U.N. goals. The Compact requires companies to align strategies and operations with universal principles on human rights, labor, environment and anti-corruption, and to take actions that advance societal goals. As a participant in the U.N. Global Compact, a company sets in motion changes to business operations so that the Compact and its principles become part of strategy, culture and day-to-day operations.

PCA. Since 1916 America's Cement Manufacturers" Portland Cement Association The Portland Cement Association (PCA) is the premier policy, research, education, and market intelligence organization serving America's cement manufacturers. PCA members represent 91% of U.S. cement production capacity with facilities in all 50 states. PCA promotes safety, sustainability and innovation in all aspects of construction; it fosters continuous improvement in cement manufacturing and distribution. The PCA generally promotes economic growth and sound infrastructure investment.
